Certificate of Analysis

CBD/THC Content Analysis Report

CBD content analysis is conducted through using a pre-defined GC-MS method where the sample is ran against a set of standard of known concentration. Using validated software, a calibration curve is created which allows a calculation of the final CBD concentration.

THC analysis is carried out using a standard concentration of THC from an approved third-party supplier which is then used to compare the test sample to determine the level of THC present. Using the GC-MS, the THC content is analysed and calculated.

COMPOUND	CAS NO	LABELLED CONCENTRATION (MG)	CALCULATED CONCENTRATION (MG)
